

POWER BI MAJOR CAPSTONE PROJECT
END TO END
POWER BI PROJECT GUIDE

PROJECT TITLE	SCHOOL INFRASTRUCTURE & ENROLLMENT ANALYTICS DASHBOARD
PROJECT CATEGORY	Education Analytics School Analytics Infrastructure Analytics
INSTITUTE NAME	Infinity Code Nexus
TRAINER / GUIDE	Anamania Anand Kumar
CREATED BY	Sampenga Sai Durga
TOOLS USED	Power BI Desktop Power Query, DAX & Power BI Service
SUBMISSION DATE	[10/06/2026]

Prepared as part of the Power BI Masterclass Program to demonstrate skills in
Data Analysis, Data Modeling, DAX Development, Dashboard Design, UI/UX,
Storytelling, and Business Intelligence Reporting.

PROJECT OVERVIEW

=====

PROJECT OBJECTIVE

Develop a comprehensive Power BI dashboard to analyze school infrastructure, enrollment, teacher availability, and educational distribution across locations.

Participants are expected to:

- ✓ Analyze school infrastructure
- ✓ Evaluate student enrollment
- ✓ Assess teacher availability
- ✓ Compare school categories
- ✓ Generate meaningful insights
- ✓ Present recommendations

PROJECT GOAL

Convert raw school data into actionable insights that help understand educational facilities, student distribution, and school performance across different regions.

BUSINESS PROBLEM

Educational departments and school administrators need visibility into school infrastructure, student enrollment, and resource allocation.

The objective is to identify:

- Which regions have more schools?
- Which schools have higher enrollment?
- How are teachers distributed?
- Whether infrastructure is adequate?
- How school categories vary by region?

BUSINESS QUESTIONS

Participants must answer:

- 1. How many schools are available?
- 2. Which districts have more schools?
- 3. Which school categories dominate?
- 4. What is the total student enrollment?
- 5. What is the teacher-to-student ratio?
- 6. Which schools have better infrastructure?
- 7. Which regions need improvement?

DATASET INFORMATION

=====

DATASET NAME : Basic Details of Schools

DATASET DETAILS : Approximate Records 500+

Columns : 44

EXPECTED ANALYSIS AREAS

=====

- School Analytics
- Enrollment Analytics
- Teacher Analytics
- Infrastructure Analytics
- Location Analytics

POWER QUERY TRANSFORMATIONS

=====

DATA CLEANING ACTIVITIES

- ✓ Validated School Records
- ✓ Handled Missing Values
- ✓ Corrected Data Types
- ✓ Standardized State Names
- ✓ Standardized District Names

✓ Verified Student, Teacher and Classroom Counts

✓ Removed Duplicate Records

=====

DATA PREPARATION ACTIVITIES

✓ Renamed Columns for Better Readability

✓ Replaced Blank and Null Values

✓ Corrected Data Formats

✓ Removed Unnecessary Columns

✓ Validated Numerical Columns

✓ Created Relationships Between Tables

✓ Prepared Data for Dashboard Analysis

=====

CUSTOM COLUMNS CREATED

✓ Teacher-Student Ratio

✓ Average Students Per School

✓ Average Teachers Per School

✓ Infrastructure Status Category

✓ School Location Classification (Urban/Rural)

=====

SCREENSHOT

The screenshot displays a data management interface with a table titled 'Basic Details of Schools_Sample_Data (500 rows)'. The table has columns for State, State Code, District, District Code, Sub-District, Sub-District Code, and Cluster. The interface includes a top navigation bar with 'File', 'Home', and 'Help' menus, and a 'Table tools' section with options like 'Manage relationships', 'New Quick measure', 'New column', 'New table', 'Mark as date table', and 'Calendars'. A sidebar on the right lists various data fields and calculations available for the table, such as 'Avg Class Rooms Per School', 'Avg Enrollment Per School', 'Avg Students Per School', 'Avg Teachers Per School', 'Class From (class_from)', 'Class Rooms (class_rooms)', 'Class To (class_to)', 'Cluster (cluster_name)', 'District (district_name)', 'District Code (district_code)', 'Enrollment Title', 'Highest Enrollment', 'Latitude (latitude)', 'Location Hierarchy', 'Location Type (location_type)', 'Longitude (longitude)', 'Management (management)', 'Non Primary Students (class_...', 'Other Rooms (other_rooms)', and 'Pincode (pincode)'.

State (state_name)	State Code (state_code)	District (district_name)	District Code (district_code)	Sub-District (subdistrict_name)	Sub-District Code (subdistrict_code)	Cluster (cluster_name)
Telangana	36	Suryapet	696	Huzurnagar	5333	Zphs Lingagiri

DATA MODELING

MODEL DESIGN

Purpose:

The data model was designed to support interactive analysis of school distribution, student enrollment, teacher availability, and infrastructure facilities across different states and districts. The model enables efficient reporting, filtering, and dashboard analysis.

MAIN TABLE

Basic Details of Schools Dataset

KEY FIELDS

- School Name
- State Name
- District Name
- Sub-District Name
- Village Name
- School Category
- Management Type
- Location Type
- Total Students
- Total Teachers
- Class Rooms
- Pre Primary Rooms
- Other Rooms

RELATIONSHIPS

Single Table Data Model

(No additional relationships were required because the dataset was maintained in a structured and consolidated format.)

FILTER DIRECTION

Single Direction

MODEL BENEFITS

- ✓ Improved Report Performance
- ✓ Easy DAX Development
- ✓ Simplified Dashboard Design
- ✓ Efficient Data Analysis
- ✓ Interactive Filtering and Drill Analysis
- ✓ Better User Experience

SCREENSHOT

Single Table Data Model

DAX MEASURES USED

TOTAL SCHOOLS

Total Schools =

DISTINCTCOUNT('Basic Details of Schools_Sample_Data'[School Name (school_name)])

Purpose:

Calculate the total number of schools.

=====

TOTAL STUDENTS

Total Students =

SUM('Basic Details of Schools_Sample_Data'[Total Students (class_with_pre_primary_students)])

Purpose:

Calculate total student enrollment.

=====

TOTAL TEACHERS

Total Teachers =

SUM('Basic Details of Schools_Sample_Data'[Teachers (total_teachers)])

Purpose:

Calculate total teachers across all schools.

=====

TOTAL DISTRICTS

Total Districts =

DISTINCTCOUNT('Basic Details of Schools_Sample_Data'[District (district_name)])

Purpose:

Calculate the total number of districts.

=====

TOTAL STATES

Total States =

DISTINCTCOUNT('Basic Details of Schools_Sample_Data'[State (state_name)])

Purpose:

Calculate the total number of states.

=====

TOTAL CATEGORIES

Total Categories =

DISTINCTCOUNT('Basic Details of Schools_Sample_Data'[School Category (school_category)])

Purpose:

Calculate the total number of school categories.

=====

TOTAL MANAGEMENT TYPES

Total Management Types =

DISTINCTCOUNT('Basic Details of Schools_Sample_Data'[Management (management)])

Purpose:

Calculate the total number of management types.

=====

TOTAL CLASS ROOMS

Total Class Rooms =

SUM('Basic Details of Schools_Sample_Data'[Class Rooms (class_rooms)])

Purpose:

Calculate total classrooms available.

=====

TOTAL PRE PRIMARY ROOMS

Total Pre Primary Rooms =

SUM('Basic Details of Schools_Sample_Data'[Pre Primary Rooms])

Purpose:

Calculate total pre-primary classrooms.

=====

TOTAL OTHER ROOMS

Total Other Rooms =

SUM('Basic Details of Schools_Sample_Data'[Other Rooms (other_rooms)])

Purpose:

Calculate total other rooms available

=====

AVERAGE STUDENTS PER SCHOOL

Avg Students Per School =

DIVIDE([Total Students],[Total Schools])

Purpose:

Calculate average students per school.

=====

AVERAGE TEACHERS PER SCHOOL

Avg Teachers Per School =

$\text{DIVIDE}([\text{Total Teachers}], [\text{Total Schools}])$

Purpose:

Calculate average teachers per school.

=====

AVERAGE ENROLLMENT PER SCHOOL

Avg Enrollment Per School =

$\text{DIVIDE}([\text{Total Enrollment}], [\text{Total Schools}])$

Purpose:

Calculate average enrollment per school.

=====

AVERAGE CLASS ROOMS PER SCHOOL

Avg Class Rooms Per School =

$\text{DIVIDE}([\text{Total Class Rooms}], [\text{Total Schools}])$

Purpose:

Calculate average classroom availability per school.

=====

TEACHER STUDENT RATIO

Teacher Student Ratio =

$\text{DIVIDE}([\text{Total Students}], [\text{Total Teachers}])$

Purpose:

Calculate the average number of students per teacher.

VISUALIZATIONS USED

KPI CARDS

Purpose:

KPI Cards are used to display key educational metrics and provide a quick overview of school, enrollment, teacher, and infrastructure statistics.

KPIs Included:

- Total Schools
- Total Students
- Total Teachers
- Total Districts
- Total States
- Total Categories
- Total Management Types
- Total Class Rooms
- Total Pre Primary Rooms
- Total Other Rooms
- Average Students Per School
- Average Enrollment Per School
- Average Teachers Per School
- Average Class Rooms Per School
- Teacher Student Ratio
- Highest Enrollment

SCREENSHOT

CLUSTERED BAR CHART

Purpose:

Clustered Bar Charts are used to compare educational metrics across states, districts, and school categories.

The charts were used to analyze:

- Schools by State
- schools by management
- Enrollment by states
- Districts by Enrollment
- Districts by Teachers
- Class Rooms by State
- State vs Total Schools

These visualizations help identify top-performing and low-performing regions.

SCREENSHOT

Class Rooms by State

CLUSTERED COLUMN CHART

Purpose:

Clustered Column Charts are used to compare distributions and rankings across categories.

The charts were used to analyze:

- Enrollment by School Type
- Infrastructure by School Category
- Teacher Analytics by State

- Schools by District
- Schools by Location Type
- Student Enrollment by District

These visualizations help compare educational performance across categories.

SCREENSHOT

=====

DONUT CHART

Purpose:

Donut Charts are used to show percentage distribution and category-wise contribution.

The charts were used to analyze:

- Schools by Category
- Schools by Management Type
- Enrollment by School Category
- Teacher Student Ratio Distribution
- Infrastructure Distribution by Location

These visuals help identify dominant categories and management types.

SCREENSHOT

TREEMAP

Purpose:

Treemaps are used to visualize hierarchical data and compare classroom availability across districts.

The charts were used to analyze:

- Districts by Class Rooms

These visualizations help identify districts with higher and lower infrastructure availability.

SCREENSHOT

MAP VISUALIZATION

Purpose:

Map Visualizations are used to display geographical distribution of schools.

The charts were used to analyze:

- School Distribution Across States and Districts

These visuals provide location-based insights and support geographical analysis.

SCREENSHOT

AREA CHART

Purpose:

Used to identify schools requiring infrastructure improvement.

The charts were used to analyze:

- Schools with Poor Infrastructure

These visuals highlight schools that need additional facilities and support.

SCREENSHOT

TABLE / MATRIX

Purpose:

Table and Matrix visuals are used to display detailed school-level information and support drill-through analysis.

The visuals were used to analyze:

- Schools Requiring Teacher Allocation
- Schools by Enrollment

These visuals provide detailed records and support decision-making.

SCREENSHOT

Schools Requiring Teacher Allocation			
School Name (school_name)	District (district_name)	Sum of Teachers (total_teachers)	Total Students
ZPPS ANANDWADI 1	Parbhani	2	22

=====

SLICERS

Purpose:

Slicers provide interactive filtering and dynamic analysis across all dashboards.

Slicers Implemented:

State Slicer

- Enables state-wise analysis.

District Slicer

- Enables district-wise analysis.

School Category Slicer

- Filters schools by category.

Management Type Slicer

- Enables management-wise analysis.

All slicers are synchronized across dashboards using Sync Slicers.

DASHBOARD SCREENSHOTS

EXECUTIVE OVERVIEW

The Executive Overview Dashboard provides a comprehensive summary of school distribution, student enrollment, teacher availability, and infrastructure facilities. It displays key performance indicators such as Total Schools, Total Students, Total Teachers, Total Class Rooms, Teacher Student Ratio, and Average Students Per School. Interactive slicers allow users to filter data by State, District, School Category, and Management Type. This dashboard serves as a central overview for educational planning and decision-making.

Key Insights:

- Total Schools: 500
- Total Students: 95K
- Total Teachers: 3K
- Total Class Rooms: 3K
- Teacher Student Ratio: 28.48
- Average Students Per School: 189.36
- Primary schools represent the largest category.
- Rural schools are more numerous than Urban schools.
- School distribution varies significantly across states and districts.

SCHOOL ANALYTICS

Explanation

The School Analytics Dashboard focuses on analyzing the distribution of schools across states, districts, school categories, management types, and location types. It helps identify the concentration of schools and provides insights into educational infrastructure distribution across regions.

Key Insights:

- Uttar Pradesh has the highest number of schools in the dataset.
- Primary schools account for the largest share of schools.
- Government-managed schools form the majority of institutions.
- Rural schools outnumber urban schools.
- School distribution varies considerably across districts.
- Interactive filtering enables detailed state-wise and district-wise analysis.

=====

ENROLLMENT ANALYTICS

Explanation

The Enrollment Analytics Dashboard focuses on student enrollment patterns across states, districts, school categories, and school types. It helps identify regions with high and low enrollment and supports educational resource planning.

Key Insights:

- Total Student Enrollment: 95K
- Average Enrollment Per School: 189.36
- Enrollment differs significantly across districts.
- Certain school categories contribute a larger share of total enrollment.
- Co-educational schools account for the majority of enrolled students.
- District-wise analysis highlights enrollment concentration areas.
- Interactive filters allow detailed enrollment comparisons.

=====

TEACHER ANALYTICS

Explanation

The Teacher Analytics Dashboard evaluates teacher availability and allocation across schools, districts, and states. It provides insights into teacher distribution and identifies schools requiring additional teacher support.

Key Insights:

- Total Teachers: 3K
- Teacher Student Ratio: 28.48
- Average Teachers Per School: 6.65
- Teacher distribution varies across districts.
- Several schools have low teacher counts and may require additional allocation.
- District-wise analysis helps identify teacher shortages.
- Conditional formatting highlights schools requiring attention.
- Interactive filtering supports detailed teacher analysis.

INFRASTRUCTURE ANALYTICS

Explanation

The Infrastructure Analytics Dashboard focuses on classroom availability and infrastructure facilities across schools. It helps identify infrastructure gaps and supports planning for educational facility improvements.

Key Insights:

- Total Class Rooms: 3K
- Total Pre Primary Rooms: 267
- Total Other Rooms: 1K
- Average Class Rooms Per School: 6.44
- Classroom availability varies across states and districts.
- Rural and urban infrastructure distribution can be compared.
- Schools with poor infrastructure are highlighted for analysis.
- Treemap visualization identifies districts with greater classroom availability.
- Interactive filtering enables detailed infrastructure assessment.

KEY INSIGHTS

=====

INSIGHT-1

The dataset contains approximately 500 schools, 95K students, and 3K teachers, providing a comprehensive view of educational infrastructure and enrollment patterns.

INSIGHT-2

Primary schools constitute the largest share of schools, indicating that primary education forms the foundation of the educational system.

INSIGHT-3

Rural schools significantly outnumber urban schools, highlighting the importance of rural educational development and resource allocation.

INSIGHT-4

Student enrollment is unevenly distributed across districts, with certain districts accounting for a larger proportion of enrolled students.

INSIGHT-5

The average Teacher-Student Ratio is approximately 28.48, helping assess teacher workload and educational quality across schools.

INSIGHT-6

Several schools have low teacher counts and require additional teacher allocation to maintain balanced educational delivery and improve learning outcomes.

INSIGHT-7

Classroom availability varies considerably across states and districts, indicating infrastructure disparities that may affect teaching and learning environments.

INSIGHT-8

The average number of classrooms per school is approximately 6.44, providing an important measure of infrastructure capacity and facility availability.

INSIGHT-9

Government-managed schools represent the majority of institutions, demonstrating their significant role in delivering education across regions.

INSIGHT-10

Infrastructure analysis identifies schools with poor classroom availability, helping administrators prioritize investments and facility improvements.

INSIGHT-11

Interactive analysis through slicers, drill-through, tooltips, and dynamic dashboards enables efficient exploration of educational trends and supports data-driven decision-making.

INSIGHT-12

The integrated dashboard provides valuable insights into school distribution, student enrollment, teacher allocation, and infrastructure facilities, assisting policymakers and educational administrators in strategic planning and resource management.

BUSINESS RECOMMENDATIONS

=====

RECOMMENDATION-1

Educational authorities should prioritize districts with low school availability to ensure equal access to education across all regions.

RECOMMENDATION-2

Schools with high student enrollment and low teacher availability should receive additional teacher allocations to improve the Teacher-Student Ratio.

RECOMMENDATION-3

Government agencies should focus on improving infrastructure in schools with limited classroom facilities and poor infrastructure conditions.

RECOMMENDATION-4

Rural schools should receive targeted investments to strengthen educational facilities and ensure equitable learning opportunities.

RECOMMENDATION-5

Regular monitoring of enrollment trends, teacher distribution, and infrastructure availability should be conducted to support effective educational planning.

FEATURES IMPLEMENTED

=====

- ✓ KPI Cards
- ✓ Drill Down
- ✓ Drill Through
- ✓ Custom Tooltips
- ✓ Dynamic Titles
- ✓ Slicers
- ✓ Sync Slicers
- ✓ Conditional Formatting
- ✓ Navigation Buttons
- ✓ Interactive Maps
- ✓ Treemap Visualization
- ✓ Cross Filtering
- ✓ Custom Theme

CHALLENGES FACED

=====

- Data Cleaning Challenges
- Handling Missing Values
- DAX Measure Development
- Dynamic Title Implementation

Drill Through Configuration
Tooltip Design
Dashboard Layout Design
Visual Selection and Optimization
Performance Tuning

LEARNINGS

Power Query
Data Cleaning
Data Modeling
DAX Development
Dashboard Design
Interactive Reporting

Business Analysis
Power BI Service Concepts

PROJECT STORYTELLING

BUSINESS SCENARIO

Educational departments and policymakers manage large volumes of school-related data including school distribution, student enrollment, teacher availability, and infrastructure facilities. However, extracting meaningful insights from raw data is challenging.

This project transforms educational data into interactive dashboards that support monitoring, analysis, and decision-making for educational planning and resource allocation.

BUSINESS PROBLEM

- Which states and districts have the highest and lowest number of schools?
- How is student enrollment distributed across schools and districts?
- Are teachers adequately distributed across schools?
- Which schools require additional teacher allocation?
- How is infrastructure distributed across different regions?

- Which schools require infrastructure improvements?
- How can educational resources be allocated more effectively?

ANALYSIS APPROACH

- Analyzed school distribution across states and districts.
- Evaluated student enrollment patterns.
- Assessed teacher availability and Teacher-Student Ratios.
- Analyzed classroom and infrastructure availability.
- Compared school categories and management types.
- Identified schools requiring additional support.
- Implemented Drill Down, Drill Through, Tooltips, Dynamic Titles, and Conditional Formatting.
- Developed interactive dashboards for educational decision-making.

KEY FINDINGS

- The dataset contains approximately 500 schools, 95K students, and 3K teachers.
- Primary schools constitute the largest share of educational institutions.
- Rural schools outnumber urban schools.
- Student enrollment is concentrated in a limited number of districts.
- Teacher availability varies significantly across districts.
- Several schools require additional teacher allocation.
- Infrastructure availability differs across states and districts.
- Schools with limited classroom facilities require infrastructure improvements.
- Government-managed schools represent the majority of institutions.
- Interactive dashboard analysis improves visibility into educational performance and resource allocation.

BUSINESS IMPACT

- Supports data-driven educational planning.
- Improves monitoring of student enrollment trends.
- Helps identify teacher shortages.

- Assists in infrastructure planning and development.
- Enables efficient allocation of educational resources.
- Improves decision-making for administrators and policymakers.
- Provides a centralized educational analytics platform.

PROJECT DEPLOYMENT

=====

DEPLOYMENT OBJECTIVE

Deploy the Power BI solution to provide stakeholders with access to interactive educational dashboards and real-time insights.

DEPLOYMENT PLATFORM

Power BI Service

=====

DEPLOYMENT PROCESS

STEP-1

Validate Data Model and DAX Measures in Power BI Desktop.

STEP-2

Optimize Dashboard Layout and Performance.

STEP-3

Publish PBIX File to Power BI Service.

STEP-4

Configure Dataset Refresh Settings.

STEP-5

Create Dashboards from Published Reports.

STEP-6

Configure User Access and Security Settings.

STEP-7

Share Dashboards with Stakeholders.

BUSINESS BENEFITS

=====

- Centralized Educational Analytics Platform

- Interactive Dashboard Reporting
- Improved Resource Allocation
- Better Infrastructure Monitoring
- Enhanced Enrollment Analysis
- Improved Teacher Allocation Planning
- Faster Data-Driven Decisions

CONCLUSION

=====

The School Infrastructure & Enrollment Analytics Dashboard successfully transformed educational data into interactive and insightful visualizations. The project analyzed school distribution, student enrollment, teacher availability, and infrastructure facilities across multiple regions.

Through the use of Power BI features such as KPI Cards, Drill Down, Drill Through, Tooltips, Dynamic Titles, Conditional Formatting, and Interactive Dashboards, the project provides valuable insights for administrators, policymakers, and educational institutions.

The solution supports informed decision-making, efficient resource allocation, and improved educational planning through comprehensive data analysis and reporting.
