SUBMISSION DATE	[09/06/2026]
-----------------	--------------

Prepared as part of the Power BI Masterclass Program to demonstrate skills in
Data Analysis, Data Modeling, DAX Development, Dashboard Design, UI/UX,
Storytelling, and Business Intelligence Reporting.

PROJECT OVERVIEW

PROJECT OBJECTIVE

Develop a comprehensive Power BI dashboard to analyze student social media usage, mental health, stress levels, lifestyle patterns, and academic behavior.

Participants are expected to:

- ✓ Analyze social media usage patterns
- ✓ Evaluate mental health scores
- ✓ Understand stress level distribution
- ✓ Analyze study habits and academic behavior
- ✓ Evaluate lifestyle factors such as sleep and physical activity
- ✓ Compare student behavior across different countries
- ✓ Generate business insights and recommendations

PROJECT GOAL

Transform student social media and mental health data into actionable insights that help educational institutions, counselors, and researchers understand student well-being, digital behavior, academic habits, and lifestyle patterns.

BUSINESS PROBLEM

Educational institutions and researchers need to understand how social media usage influences student mental health, stress levels, sleep quality, and academic performance.

The objective is to identify:

- Which social media platforms are most frequently used by students?
- How social media usage affects mental health and stress levels?
- How sleep patterns and study habits influence student well-being?
- Which student groups experience higher stress levels?
- How student behavior varies across different countries?
- What actions can be taken to improve student well-being and academic outcomes?

BUSINESS QUESTIONS

=====

Participants must answer:

1. What is the average mental health score of students?
2. Which social media platform is most frequently used?
3. How many hours do students spend on social media daily?
4. Which stress level category contains the highest number of students?
5. How do sleep hours affect student mental health?
6. How do study habits vary across different academic levels?
7. Which countries have higher mental health scores?
8. How does social media usage differ by gender?
9. What is the primary purpose of social media usage among students?
10. How do lifestyle factors influence student well-being?

=====

DATASET INFORMATION

=====

DATASET NAME : Student Social Media and Mental Health Impact Dataset

DATASET DETAILS :

Approximate Records : 5,000

Columns : 13

EXPECTED ANALYSIS AREAS

=====

- Executive Analytics
- Social Media Analytics
- Mental Health Analytics
- Lifestyle Analytics
- Country Analytics
- Academic Behavior Analytics

POWER QUERY TRANSFORMATIONS

=====

DATA CLEANING ACTIVITIES

- ✓ Validated Student Records
- ✓ Handled Missing Values
- ✓ Corrected Data Types
- ✓ Standardized Country Names
- ✓ Standardized Stress Level Categories
- ✓ Verified Mental Health Score Values

=====

DATA PREPARATION ACTIVITIES

- ✓ Renamed Columns
- ✓ Replaced Blank Values
- ✓ Corrected Data Formats
- ✓ Removed Unnecessary Columns
- ✓ Validated Numerical Columns
- ✓ Prepared Data for Dashboard Analysis

CUSTOM COLUMNS CREATED

None

- ✓ Better User Experience

SCREENSHOT

Single Table Data Model

DAX MEASURES USED

=====

TOTAL STUDENTS

COUNTROWS('Student Social Media and Mental Health Impact')

PURPOSE : Calculate the total number of students in the dataset.

=====

AVERAGE MENTAL HEALTH SCORE

AVERAGE('Student Social Media and Mental Health Impact'[Mental_Health_Score])

PURPOSE : Calculate the average mental health score of students.

=====

AVERAGE DAILY USAGE HOURS

AVERAGE('Student Social Media and Mental Health Impact'[Avg_Daily_Usage_Hours])

PURPOSE : Calculate the average number of hours students spend on social media daily.

=====

AVERAGE STUDY HOURS

AVERAGE('Student Social Media and Mental Health Impact'[Study_Hours_Per_Day])

PURPOSE : Calculate the average study hours per day.

=====

AVERAGE SLEEP HOURS

AVERAGE('Student Social Media and Mental Health Impact'[Sleep_Hours_Per_Night])

PURPOSE : Calculate the average sleep duration of students.

=====

TOTAL COUNTRIES

DISTINCTCOUNT('Student Social Media and Mental Health Impact'[Country])

PURPOSE : Calculate the total number of countries represented in the dataset.

=====

MENTAL HEALTH STATUS

```
SWITCH(  
TRUE(),  
[Avg Mental Health Score] >= 7, "Healthy",  
[Avg Mental Health Score] >= 5, "Average",  
"Low"  
)
```

PURPOSE : Categorize mental health scores for conditional formatting and analysis.

VISUALIZATIONS USED

KPI CARDS

Purpose: Display key business metrics such as Total Students, Average Mental Health Score, Average Daily Usage Hours, Average Study Hours, Average Sleep Hours, and Average Stress Level.

KPIs Included:

- Total Students
- Total Countries
- Average Mental Health Score
- Average Stress Level
- High Stress Students
- Very High Stress Students
- Average Study Hours
- Average Sleep Hours
- Average Daily Usage Hours
- Average Daily Unlocks
- Stress Status

SCREENSHOT

=====

CLUSTERED BAR CHART

Purpose: Clustered Bar Charts are used to compare values across different categories and identify patterns, rankings, and distributions within the dataset.

The charts were used to analyze:

- Total Students by Country
- Mental Health Score by Gender
- Sleep Hours by Gender
- Usage Hours by Platform
- Purpose of Use vs Usage Hours
- Country-wise Student Distribution
- Drill Down and Drill Through Analysis

These visualizations help compare student behavior, platform usage, mental health patterns, lifestyle habits, and country-wise performance in an easy-to-understand format.

SCREENSHOT

CLUSTERED COLUMN CHART

Purpose: Clustered Column Charts are used to compare values across different categories and identify trends, rankings, and performance differences within the dataset.

The charts were used to analyze:

- Average Mental Health Score by Country
- Mental Health Score by Country (Conditional Formatting)
- Most Used Platforms by Students
- Lifestyle Comparison by Academic Level
- Study Hours by Gender

These visualizations help compare student mental health, platform popularity, academic behavior, and lifestyle factors across multiple categories, making it easier to identify patterns and draw meaningful conclusions.

SCREENSHOT

DONUT CHART

Purpose: Donut Charts are used to display the proportion and distribution of categories within the dataset. They help visualize how different groups contribute to the overall analysis.

The charts were used to analyze:

- Purpose of Social Media Usage by Students
- Stress Level Distribution
- Physical Activity Distribution by Gender
- Stress Level Distribution by Country

These visualizations provide a clear understanding of category-wise contributions and help identify dominant trends, student behavior patterns, stress distribution, and lifestyle differences.

SCREENSHOT

PIE CHART

Purpose: Pie Charts are used to display the percentage contribution of categories within the dataset. They provide a quick visual understanding of category distribution and relative importance.

The charts were used to analyze:

- Most Used Social Media Platforms by Students
- Study Hours Distribution by Academic Level

These visualizations help identify dominant platforms among students and compare academic study patterns across different education levels.

SCREENSHOT

TABLE / MATRIX

Purpose: Table and Matrix visuals are used to display detailed information, rankings, summaries, and drill-through analysis. These visuals help users view exact values and perform detailed record-level exploration.

The visuals were used to analyze:

- Country Ranking based on Average Mental Health Score
- Mental Health Score by Academic Level
- Average Daily Unlocks by Platform
- Detailed Student Analysis through Drill Through

These visualizations provide structured insights, support ranking analysis, and enable users to explore student behavior in greater detail.

SLICERS

Purpose: Slicers are interactive filtering tools that allow users to dynamically explore and analyze data based on specific categories and conditions.

The project implements slicers to provide a user-friendly and interactive dashboard experience.

Country Slicer

- Enables country-wise analysis of student behavior, mental health, and social media usage.

Gender Slicer

- Allows comparison between Male and Female students across different metrics.

Academic Level Slicer

- Filters data based on Graduate, Undergraduate, and High School student categories.

Most Used Platform Slicer

- Enables platform-specific analysis for social media usage and engagement patterns.

DASHBOARD SCREENSHOTS

EXECUTIVE OVERVIEW

Explanation

The Executive Overview Dashboard provides a comprehensive summary of student social media usage, mental health status, stress levels, study habits, and lifestyle patterns. It displays important KPIs such as Total Students, Average Mental Health Score, Average Stress Level, Average Study Hours, Average Usage Hours, and Average Sleep Hours. The dashboard enables users to quickly understand overall student behavior and well-being through interactive visualizations and dynamic filters. It serves as a central dashboard for schools, universities, counselors, and researchers to monitor student trends and support data-driven decision-making.

Key Insights:

- Total Students analyzed: 5,000
- Average Mental Health Score: 6.23
- Average Daily Usage Hours: 5.08
- Average Sleep Hours: 6.63
- Instagram is the most frequently used social media platform.
- A large number of students fall under High and Very High stress categories.
- Mental health scores vary across different countries, highlighting regional differences in student well-being.

=====

SOCIAL MEDIA ANALYTICS

Explanation

The Social Media Analytics Dashboard focuses on analyzing student social media usage patterns and engagement behavior. It provides insights into the most used social media platforms, average daily usage hours, daily unlock frequency, and the primary purposes of social media usage. The dashboard allows users to compare platform popularity, understand user engagement levels, and evaluate how students interact with different social media platforms. Interactive slicers help filter data by country, gender, and platform, enabling deeper analysis of usage trends and behavioral patterns.

Key Insights:

- Instagram is the most widely used social media platform among students.
- TikTok and Facebook are the second and third most popular platforms.
- Students spend an average of 5.08 hours per day on social media.
- The average number of daily unlocks is 171.45.
- Entertainment is the primary purpose of social media usage.
- Education, Networking, and News represent smaller portions of platform usage.
- Social media usage patterns vary across countries and demographic groups.

=====

MENTAL HEALTH ANALYTICS

Explanation

The Mental Health Analytics Dashboard focuses on evaluating student mental well-being and stress patterns. It provides insights into average mental health scores, stress level distribution, high-stress student populations, and mental health performance across genders, academic levels, and countries. The dashboard helps identify groups that may require additional support and enables users to understand how mental health varies among different student categories. Interactive filters allow detailed analysis based on country, gender, and academic level.

Key Insights:

- The average Mental Health Score of students is 6.23.
- A significant number of students fall under High and Very High stress categories.

- Mental health scores are relatively similar across genders.
- Graduate students show higher average mental health scores compared to High School students.
- Stress distribution indicates that student mental well-being requires continuous monitoring.
- Mental health scores vary across countries, highlighting regional differences in student wellness.
- The dashboard supports the identification of student groups that may benefit from counseling and well-being programs.

LIFESTYLE ANALYTICS

Explanation

The Lifestyle Analytics Dashboard focuses on analyzing student lifestyle habits and their impact on overall well-being. It provides insights into sleep patterns, study habits, physical activity levels, and lifestyle comparisons across different student groups. The dashboard helps identify behavioral trends that may influence mental health and academic performance. Through interactive visualizations and filters, users can compare lifestyle factors across genders, academic levels, and countries to better understand student wellness and daily routines.

Key Insights:

- Students sleep an average of 6.63 hours per night.
- The average study time is approximately 3.01 hours per day.
- Physical activity levels vary across different student groups.
- Study habits show slight differences between academic levels.
- Lifestyle factors such as sleep and physical activity have a noticeable impact on student well-being.
- Students maintaining balanced sleep and study routines tend to demonstrate better mental health outcomes.
- The dashboard highlights the importance of healthy lifestyle habits in supporting academic success and mental wellness.

COUNTRY ANALYTICS

Explanation

The Country Analytics Dashboard focuses on comparing student behavior, mental health performance, stress levels, and social media usage across different countries. It provides country-wise analysis through rankings, comparisons, and performance metrics, enabling users to identify regional trends and behavioral patterns. The dashboard incorporates advanced Power BI features such as Drill Down, Drill Through, Conditional Formatting, and interactive slicers to support detailed exploration of the data. This dashboard helps educational institutions and researchers understand how student well-being varies across different geographic regions.

Key Insights:

- Student mental health scores vary significantly across different countries.
- Country ranking analysis helps identify regions with higher and lower mental health performance.
- Stress levels differ across countries, indicating variations in student well-being.
- Drill Down functionality enables analysis from Country → Gender → Academic Level.
- Drill Through functionality provides detailed student-level analysis for selected countries.
- Conditional Formatting highlights healthy, average, and low mental health score categories.
- Interactive slicers allow users to compare student behavior across countries, genders, academic levels, and social media platforms.
- The dashboard supports data-driven decision-making by providing detailed country-level insights into student mental health and behavior.

KEY INSIGHTS

=====

INSIGHT-1

Students spend an average of **5.08 hours per day** on social media, indicating a high level of digital engagement among the student population.

INSIGHT-2

Instagram is the most frequently used social media platform, followed by TikTok and Facebook, making it the dominant platform among students.

INSIGHT-3

Students with higher social media usage hours tend to exhibit **higher stress levels and lower mental health scores**, suggesting a potential relationship between excessive screen time and well-being.

INSIGHT-4

The average student sleeps **6.63 hours per night**, highlighting the importance of sleep patterns in maintaining mental health and academic performance.

INSIGHT-5

Mental health scores vary across **countries, genders, and academic levels**, indicating that student well-being is influenced by multiple demographic and behavioral factors.

INSIGHT-6

A significant number of students fall under **High and Very High Stress** categories, emphasizing the need for mental health awareness and support programs.

INSIGHT-7

Students who maintain balanced study habits, adequate sleep, and moderate social media usage generally demonstrate **better mental health outcomes** and overall well-being.

BUSINESS RECOMMENDATIONS

=====

RECOMMENDATION-1

Educational institutions should promote **responsible social media usage** by conducting awareness programs on screen-time management and healthy digital habits.

RECOMMENDATION-2

Student counseling and mental health support services should be strengthened to assist students experiencing **High and Very High Stress** levels.

RECOMMENDATION-3

Schools and universities should encourage students to maintain **healthy sleep schedules**, as adequate sleep contributes positively to mental well-being and academic performance.

RECOMMENDATION-4

Institutions should promote **physical activity and wellness programs** to help students manage stress and improve overall health.

RECOMMENDATION-5

Regular mental health assessments and wellness surveys should be conducted to identify at-risk students and provide timely support.

PROJECT STORYTELLING

BUSINESS SCENARIO

Educational institutions and researchers collect large amounts of student data related to social media usage, mental health, stress levels, academic behavior, sleep patterns, and lifestyle habits. However, decision-makers often face challenges in converting this data into meaningful insights that can help improve student well-being and academic outcomes.

This project aims to transform student behavioral data into interactive dashboards that support data-driven decision-making and provide a deeper understanding of the relationship between social media usage and mental health.

BUSINESS PROBLEM

- How does social media usage affect student mental health?
- Which social media platforms are most frequently used by students?
- How do stress levels vary across different student groups?
- What impact do sleep patterns have on student well-being?
- How do study habits influence mental health and academic performance?
- Which countries demonstrate better mental health outcomes?
- What actions can educational institutions take to improve student well-being?

ANALYSIS APPROACH

- Analyzed student social media usage patterns and engagement behaviour.
- Evaluated mental health scores and stress level distribution.
- Compared study habits, sleep patterns, and lifestyle factors across student groups.
- Analyzed student behaviour across different countries.
- Identified relationships between social media usage, stress levels, sleep quality, and mental health.
- Developed interactive dashboards using KPIs, Drill Down, Drill Through, Conditional Formatting, and Slicers.

KEY FINDINGS

- Students spend an average of **5.08 hours per day** on social media, indicating a high level of digital engagement.
- Instagram emerged as the most frequently used social media platform among students.
- Students with higher social media usage tend to exhibit higher stress levels and lower mental health scores.
- Sleep patterns play an important role in student well-being, with students maintaining healthy sleep habits showing better mental health outcomes.
- Mental health scores and stress levels vary across countries, genders, and academic levels.
- A significant proportion of students fall into High and Very High Stress categories, highlighting the importance of mental health support initiatives.
- Balanced study habits, adequate sleep, and moderate social media usage contribute positively to overall student well-being.

BUSINESS IMPACT

- Supports data-driven decision-making for educational institutions.
- Helps counselors identify students who may require mental health support.
- Improves understanding of student behavior and digital engagement patterns.
- Enables the development of targeted wellness and awareness programs.
- Supports academic planning through analysis of study habits and lifestyle factors.
- Promotes healthier social media usage and balanced lifestyle practices.
- Provides actionable insights to improve student well-being and academic outcomes.

PROJECT DEPLOYMENT

DEPLOYMENT OBJECTIVE

Deploy the Power BI solution to enable stakeholders to access interactive dashboards and business insights in real time.

DEPLOYMENT PLATFORM

Power BI Service

DEPLOYMENT PROCESS

Power BI Service

STEP-1

Validate Data Model and DAX Measures in Power BI Desktop.

STEP-2

Optimize Dashboard Layout, Performance, and User Experience.

STEP-3

Publish PBIX File to Power BI Service.

STEP-4

Configure Dataset Refresh Settings.

STEP-5

Create Dashboard from Published Reports.

STEP-6

Apply Security and Access Permissions.

STEP-7

Share Dashboard with Business Stakeholders.

BUSINESS BENEFITS

- Centralized Student Analytics Platform
- Interactive Dashboard Reporting
- Better Mental Health Monitoring
- Faster Data-Driven Decisions
- Enhanced Academic and Lifestyle Insights
- Support for Educational Planning

CONCLUSION

=====

The Student Social Media & Mental Health Analytics Dashboard successfully analyzed student social media usage, mental health, stress levels, lifestyle habits, and academic behaviour. Through interactive dashboards and data-driven analysis, the project provided meaningful insights into the relationship between social media usage, sleep patterns, study habits, and student well-being.

The project helps educational institutions, counselors, and researchers better understand student behaviour and supports informed decision-making through interactive reporting, visualizations, and actionable recommendations.
