

Student Social Media & Mental Health Analytics Dashboard

Project Overview

The **Student Social Media & Mental Health Analytics Dashboard** is an interactive Business Intelligence project developed using **Power BI** to analyze the impact of social media usage on student mental health and academic performance.

This project transforms raw student data into meaningful insights that help educational institutions, student counselors, and researchers understand behavioral patterns, stress levels, and lifestyle factors that influence student well-being.

Project Objectives

- Analyze student behavior and digital habits.
 - Measure social media usage patterns.
 - Evaluate stress levels and mental health indicators.
 - Understand the impact of sleep and study habits on well-being.
 - Generate actionable insights and recommendations.
 - Support data-driven decision-making in educational institutions.
-

Business Problem

Educational institutions need to understand:

- How social media affects mental well-being.
 - How screen time impacts academic performance.
 - How stress levels vary among different student groups.
 - How sleep patterns influence mental health.
 - Which social media platforms have the highest usage.
-

Dataset Information

Attribute	Details
Dataset Name	Student Social Media and Mental Health Impact
Records	5,000+ Students
Columns	13+
Domain	Education Analytics & Mental Health

Tools & Technologies

- Power BI Desktop
 - Power BI Service
 - DAX (Data Analysis Expressions)
 - Power Query
 - Data Modeling
 - GitHub
-

Dashboard Pages

Executive Overview

KPIs

- Total Students
- Average Mental Health Score
- Average Daily Usage Hours
- Average Study Hours
- Average Sleep Hours
- Average Stress Level

Visuals

- Mental Health Overview
 - Platform Distribution
 - Country Analysis
 - Stress Analysis
-

 - Platform Comparison
-

Mental Health Analytics

Analysis

- Mental Health Score by Gender
- Mental Health Score by Country

- Stress Level Distribution
 - Mental Health Score by Academic Level
-

Lifestyle Analytics

Analysis

- Sleep Hours Analysis
 - Physical Activity Analysis
 - Study Hours Analysis
 - Lifestyle Comparison
-

Country Analytics

Analysis

- Country Comparison
 - Country Ranking
 - Mental Health by Country
 - Stress Level by Country
-

Key Performance Indicators (KPIs)

KPI	Value
Average Mental Health Score	6.23
Average Social Media Usage	5.08 Hours/Day
Most Used Platform	Instagram
Highest Stress Group	Undergraduate Students

Key Findings

- ✓ Students spend an average of **5.08 hours per day** on social media.
- ✓ The average **Mental Health Score** is **6.23**, indicating moderate well-being.
- ✓ **Instagram** is the most used social media platform.
- ✓ Undergraduate students report the highest stress levels.
- ✓ Lower sleep duration is associated with higher stress and poorer mental health.

✓ Excessive social media usage is linked to reduced study time and academic productivity.

✓ **USA, Germany, and Other countries** reported the highest mental health scores.

Storytelling & Insights

Observation

Students spend a significant amount of time on social media while maintaining moderate mental health scores. High screen time and inadequate sleep contribute to increased stress levels.

Insight

Excessive social media usage negatively impacts study habits, sleep quality, and mental well-being.

Business Impact

The dashboard helps educational institutions identify high-risk student groups and implement proactive interventions.

Business Recommendations

- ✓ Encourage balanced social media usage.
 - ✓ Promote healthy sleep schedules.
 - ✓ Organize mental health awareness programs.
 - ✓ Provide counseling support to high-stress student groups.
 - ✓ Encourage physical activity and healthy digital habits.
-

Interactive Features Implemented

- Drill Down
 - Drill Through
 - Conditional Formatting
 - Dynamic Filtering using Slicers
 - Interactive Navigation
 - Cross-Filtering and Cross-Highlighting
-

Required Slicers

- Country
 - Gender
 - Academic Level
 - Most Used Platform
-

Deployment

Deployment Objective

Provide an interactive and data-driven platform for monitoring student behavior and supporting mental health initiatives.

Deployment Platform

- Power BI Desktop
 - Power BI Service
 - GitHub Repository
-

Business Benefits

For Universities

- Better understanding of student behavior
- Improved student support strategies
- Enhanced academic performance

For Student Counselors

- Identify high-risk students
- Monitor mental health trends
- Design targeted interventions

For Students

- Improved awareness of healthy digital habits
 - Better balance between study and social media usage
 - Enhanced mental well-being
-

Future Enhancements

- Predictive Mental Health Analysis using Machine Learning.
 - Real-time dashboard refresh.
 - Student Risk Prediction Model.
 - AI-powered recommendations for student well-being.
