

15-DAY POWER BI MASTERCLASS

Duration: 15 Days | **Mode:** Online | **Daily:** 2 Hours

Goal: Zero to Mastery in Power BI with Hands-on Practice & Real-Time Projects

DAY 1: Introduction to Data & Power BI

- What is Data Analytics & Business Intelligence
- Power BI Ecosystem (Desktop, Service, Mobile)
- Installation & Interface Walkthrough
- Understanding Data Types & Data Flow
- First Report Creation (Basic Visuals)

 **Outcome:** Students understand Power BI environment and build their first report

DAY 2: Data Importing from Multiple Sources

- Import from Excel & CSV
- Import from SQL Server (Database connection)
- Import from Web (HTML tables)
- Introduction to APIs (JSON concept – basic awareness)
- Import from Folder (multiple files automation)
- Import vs DirectQuery (concept + use cases)
- Load vs Transform Data

 **Outcome:** Students connect Power BI to real-world data sources confidently

DAY 3: Data Cleaning with Power Query

- Power Query Editor Overview
- Removing duplicates & handling null values
- Changing data types & formatting
- Rename columns & basic transformations
- Applied Steps concept
- Basic data shaping

 **Outcome: Students clean and prepare raw data effectively**

DAY 4: Data Modeling Fundamentals

- Tables & Relationships
- Primary Key & Foreign Key
- Star Schema vs Flat Table
- Managing relationships in Power BI
- Data model best practices

 **Outcome: Students build structured and optimized data models**

DAY 5: Basic Visualizations & Report Building

- Bar Chart, Line Chart, Pie Chart, Cards
- Slicers & Filters
- Visual formatting
- Report layout design basics

 **Outcome: Students create clean and meaningful dashboards**

DAY 6: DAX Fundamentals

- Introduction to DAX
- Calculated Columns vs Measures
- Basic Functions: SUM, COUNT, AVERAGE
- Logical Functions: IF, DIVIDE

 **Outcome:** Students start writing basic DAX formulas

DAY 7: Advanced DAX

- CALCULATE & FILTER
- Time Intelligence Functions
- Conditional calculations
- Real-world DAX use cases

 **Outcome:** Students perform advanced data analysis

DAY 8: Advanced Data Transformation

- Merge Queries & Append Queries
- Group By operations
- Pivot & Unpivot
- Custom Columns creation

 **Outcome:** Students handle complex datasets efficiently

DAY 9: Interactive Dashboard Development

- Drill-down & Drill-through
- Bookmarks
- Buttons & Navigation
- Custom Tooltips

 **Outcome:** Students build interactive dashboards

DAY 10: Real-Time Project – Part 1

- Business Problem Understanding
- Dataset exploration
- Data cleaning & modeling

 **Outcome:** Students begin working on industry-level project

DAY 11: Real-Time Project – Part 2

- KPI creation
- Applying DAX in projects
- Building dashboards

 **Outcome:** Students develop analytical thinking

DAY 12: Dashboard Design & Storytelling

- UI/UX principles
- Color theory
- Data storytelling techniques
- Best dashboard practices

 **Outcome:** Students design professional dashboards

DAY 13: Power BI Service (Cloud)

- Publishing reports
- Workspaces & sharing
- Dashboards vs Reports
- Scheduled refresh

 **Outcome:** Students deploy reports in real-world environment

DAY 14: Performance Optimization & Interview Prep

- Data model optimization
- Reducing file size
- Performance best practices
- Interview questions & case studies

 **Outcome: Students become job-ready**

DAY 15: Capstone Project & Presentation

- End-to-end dashboard creation
- Student presentations
- Feedback & improvements

 **Outcome: Students showcase mastery with confidence**

PROGRAM OVERVIEW

Daily Learning Structure

- **Concept Explanation:** 30 mins
- **Live Demo:** 30 mins
- **Hands-on Practice:** 40 mins
- **Task/Challenge:** 20 mins

Final Outcome

- Build professional dashboards
- Write strong DAX formulas
- Work with real-world data sources
- Deliver insights confidently
- Ready for internships & job roles

*“From raw data to refined insight —
this journey transforms learners into thinkers,
and thinkers into storytellers of data.”*
